

Hospital Website Auditing – Best Hospitals in India

Self-Learning Web Audit

Project Outline

This self-learning audit examined the top 3 hospital websites ranking for "Best Hospitals in India."

Domain authority

Evaluated website domain authority as a key SEO health metric for hospital websites.

Backlink analysis

Analyzed backlink profiles to assess online reputation and search ranking potential.

Professional tools

Used specialized tools like Whois, DAPA Checker, Ahrefs, Google PageSpeed Insights, and Pingdom for analysis.

Page speed

Tested loading speeds to evaluate user experience and search engine optimization factors.

Mobile optimization

Checked mobile-friendliness to ensure websites perform well across all devices.

Traffic assessment

Measured website traffic patterns to understand audience reach and engagement.

Digital Vitals of Indian Healthcare websites

Three major healthcare websites emerged as leaders in the Indian market, each with distinct digital footprints.

Traffic performance

Max Healthcare dominates with 2,300,000 visitors, followed by Fortis with 899,400, while Newsweek has 87,500.

Mobile optimization

Max Healthcare excels with perfect 100/100 mobile scores, while Fortis lags at 28/100 with poor mobile friendliness.

Domain authority

Newsweek leads with 93/100, while Max and Fortis have moderate scores of 51/100 and 54/100 respectively.

Performance analysis

Fortis Healthcare

Despite decent domain authority, Fortis struggles with poor mobile performance, extremely slow page speed, and virtually no backlinks. These metrics indicate urgent need for optimization to improve user experience and SEO visibility.

Newsweek

Established website with high domain authority and substantial backlinks. Despite moderate traffic, the site performs well on both mobile and desktop, representing strong SEO fundamentals and reliability.

Max Healthcare

Leads in traffic and performance metrics with excellent mobile and desktop scores and lightning-fast page speed. Its moderate domain authority demonstrates effective website optimization can outperform older, established websites.

Key Insights

The audit revealed critical patterns across the healthcare digital landscape.

Fortis Healthcare underperforms

Demonstrates worst performance with extremely slow loading times, poor mobile optimization, and a complete absence of backlinks.

Established domains maintain strength

Websites like Newsweek maintain strong SEO fundamentals through authoritative domain scores and substantial backlinks, even with comparatively moderate traffic figures.

Max Healthcare leads performance

Emerges as the best performer with fastest speed, highest traffic, and excellent mobile/desktop scores despite not being the oldest domain.

Recommendations

Prescription Plan

Based on the audit findings, each website requires specific improvements to optimize their digital presence.

Fortis Healthcare: Improve page speed, optimize for mobile, increase backlinks, and enhance SEO content.

Max Healthcare: Improve domain authority through link building and content optimization.

Newsweek: Increase engagement and traffic through updated content, better UX, and faster loading where possible.

Analysis

Digital diagnosis

By addressing their respective weaknesses, these hospitals can significantly improve their visibility, user experience, and ultimately, their ability to attract patients in an increasingly digital healthcare marketplace.

The website audit highlights clear strengths and weaknesses of each hospital's online presence. Performance metrics, traffic statistics, backlink profiles, mobile optimization, and page speed emerge as key factors.

Thank you

This website auditing exercise helped me understand performance metrics and SEO strengths.

SEO evaluation

The audit revealed both strengths and weaknesses in search engine optimization, providing a comprehensive view of the website's current positioning.

Practical methodology

I learned various auditing tools and techniques that will be valuable for future projects and continued website optimization efforts.

Website performance insights

I gained valuable knowledge about key metrics including domain authority, page authority, backlinks, traffic analysis, and website speed performance.
